EDUCATION

I.K.Gujral Punjab Technical University
B.Tech in Computer Science

Kapurthala, Punjab, India
2022 - 2026

TECHNICAL SKILLS

Languages: HTML5, Tailwind CSS, JavaScript, C, C++.

Frameworks and Tools: React.js, Node.js, Express.js, Next.js, Git.

Backend and Database: MongoDB, Firebase Authentication, Cloud Firestore

Deployment and DevOps Vercel, Render, Git/GitHub, CI/CD

Additional Tools and Concepts RESTful API Integration, Error Handling, Code Splitting, Performance Optimization, Component-Based Architecture, Testing and Debugging, Code Reviews.

WORK EXPERIENCE

Pisoft Informatics

Jan 2026 - Present

MERN Stack Intern

- * Developed and maintained scalable web applications using the MERN stack, contributing to multiple live projects from conceptualization to deployment.
- * Engineered custom RESTful APIs to facilitate seamless data communication between MongoDB and React-based front-end interfaces. Participated in regular code reviews with senior developers, providing and receiving constructive feedback.
- * Implemented robust authentication systems using JSON Web Tokens (JWT) and managed secure user access via Role-Based Access Control (RBAC).
- * Conducted thorough testing and debugging of MERN applications using industry-standard frameworks to ensure high-quality performance and seamless user experiences.

Scholiverse

May 2024 - July 2024

Web Developer

- * Built a React.js-based frontend for a real-time chatbot, enhancing user engagement and ensuring a smooth, interactive experience across all devices.
- * Automated data backup and maintenance tasks, saving 2 hours per week.
- * Collaborated with teammates to deliver a chatbot solution for a company client.

PROJECTS

• Vault [View Project](#)

- * Developed a comprehensive Asset Management and IT Helpdesk system using the MERN stack (MongoDB, Express, React, Node.js) to streamline inventory tracking and ticket resolution.
- * Engineered a secure authentication layer implementing JSON Web Tokens (JWT) and Role-Based Access Control (RBAC) to manage granular permissions for users and administrators.
- * Integrated WebSockets via Socket.io to provide real-time notifications for ticket updates and asset status changes, enhancing team responsiveness.
- * Implemented secure data persistence and session management using HTTP-only cookies, ensuring robust protection against cross-site scripting (XSS) attacks.
- * Designed a modern, responsive UI following minimalist and glassmorphism principles, featuring smooth animations and a highly intuitive user interface.

• Auto-Swift [View Project](#)

- * Developed a Vehicle Service Management web application using React, Node.js and Firebase.
- * Integrating a chatbot, mileage calculator, and service package management. Designed for streamlined vehicle servicing, customer engagement, and efficient data handling.
- * Built dynamic, reusable UI components in React.js, improving code maintainability and reducing frontend development time.
- * Architected a serverless backend using Firebase, leveraging Cloud Firestore for real-time data synchronization of vehicle locations and maintenance logs.
